~~How to Test a Honda Alternator Without Removing It | It ...~~

~~How to Test Your Alternator Testing : Using a multi-meter set to DC volts, connect the positive and negative leads to the same on the battery with the car's engine running. You should see from 13.2 - 14.7 volts. If you see less than this and confirm it is the same when the engine is running or not, then you know the alternator is not charging.~~

~~Alternator bench test & autopsy #1418~~

~~Regulator Test - NOTE - The following test assumes alternator is satisfactory. - 1) Disconnect variable resistor and remove link bridging regulator negative and "F" terminals. With remainder of test circuit still connected, start engine and run up to 3200 RPM (6000 alternator RPM), until ammeter registers output current of less than 10 amps.~~

~~How to Check an Alternator: 8 Steps (with Pictures) — wikiHow~~

~~Don't test an alternator by disconnecting the negative battery cable. Use a voltmeter instead to conduct a simple, safe test. If it's in the range, it's good. Connect the meter leads to the battery terminals and look for 13.8 to 15.3 volts (engine running, lights and accessories off). That means ...~~
