ProDOS is the name of two similar operating systems for the Apple II series of personal computers. The original ProDOS, renamed ProDOS 8 in version 1.2, is the last official operating system usable by all 8-bit Apple II series computers, and was distributed from 1983 to 1993. [citation needed] The other, ProDOS 16, was a stop-gap solution for the 16-bit Apple II GS that was replaced by GS/OS ...

most of the word processing programs available for proDOS on the apple ii family of computers. however, many of these word processing programs are not compatible with each other. because of this, you should follow the setup instructions in this manual for your word processor before using the speller to proofread any of your files.

## **ProDOS 8 Technical Note #23**

Fixes a bug when launching ProDOS 2.4 from GS/OS using (Closed-Apple) to activate Bitsy Bye. Fixes a ROM bug in un-enhanced Apple //e when quitting to Bitsy Bye with 80-column mode enabled. Files on disk have been organized for faster booting and file access. ProDOS 2.4.1 moves GS/OS support code to the end of the file.

is the last of three manuals that describe ProDOS(TM), the most powerful disk operating system available for the Apple II. The ProDOS User's Manual tells how to copy, rename, and remove ProDOS files using the ProDOS Filer program, and how to move files from DOS disks to ProDOS disks using the DOS-ProDOS Conversion

All Apple II's, from the 64k Apple II+ through the IIgs, can run versions of ProDOS up through version 1.9. Versions 2.x.x require a 128k Apple IIe, IIc, or IIgs. Creating bootable ProDOS diskettes is a bit more bother because, unlike DOS 3.3, ProDOS is not automatically written to protected sectors on the diskette via an INIT command.
