9: Cellular Respiration and Fermentation; Life is Work:-Living systems require a constant input of energy to survive. -organisms must take in more energy than they use-Energy enters a system in the form of solar energy -this solar energy drives the process of photosynthesis (6CO 2 + 6H2O ----> C6H12O6 + 6O2)

Cellular Respiration OverviewChapter 9-1. Living things get most of the energy they need from glucose. Autotrophs make glucose using photosynthesis. Heterotrophs get glucose from food they eat. Cellular Respiration. The process that releases energy by breaking down glucose and other food molecules in the presence of oxygen.
