fishes were reported as "Sharks, rays, skates, etc. nei" and not further identified.

*drsticky.weebly.com*

Fishes are vertebrates with scales, fins and gills. They are exclusively aquatic. There are three major types of fishes: Jawless fishes (Cyclostomes), Cartilaginous (Chondrichthyes) and Bony (Osteichthyes) fishes. Cyclostomes (Jawless fishes) have a circular aperture called mouth. They lack paired fins and are called lamprey and hag fish.

*Difference between Cartilaginous and Bony fishes ...*

Sharks are cartilaginous fish in the class Elasmobranchii. There are about 400 species of sharks. Below are some of the best-known varieties of sharks, along with facts about sharks that you may ...

*Bony Fish Vs Cartilaginous Fish: 16 Differences & 10 ...*

Shark skeletons are very different from those of bony fish and terrestrial vertebrates. Sharks and other cartilaginous fish (skates and rays) have skeletons made of cartilage and connective tissue. Cartilage is flexible and durable, yet is about half the normal density of bone. This reduces the skeleton's weight, saving energy.
