RESPONDING TO ALARM SIGNALS 1.

Edwards Signaling - Product Documents & Software

object = io64; Calling io64 with no input arguments creates a persistent instance of the io64 interface object and returns a 64-bit handle to its location. This command must be issued first since the object handle is a required input argument for all other calls to io64. This io64 call will not work properly unless a return variable is specified (i.e., 'object' in the example to the left).
