

# Guidelines For Antibody Identification

## **Guidelines For Antibody Identification**

Guidelines for Antibody Identification. Developed for the Scientific Section Coordinating Committee by Marilyn Moulds, MT (ASCP)SBB, and Mary Kowalski, MT (ASCP)SBB. This Guideline is intended to assist transfusion services with the identification of antibodies in patients with a reactive pretransfusion antibody detection test. Its major sections address 1) routine testing and interpretation guidelines, 2) additional guidance and testing, and 3) unusual antibody identification situations.

### **Pre-Transfusion Compatibility Procedures in Blood ...**

When red cells taken from a blood donation unit are found to be positive in an antiglobulin crossmatch against patient's serum/plasma, but no activity is detected in the serum/plasma against red cells in an identification panel, it is likely that: either (a) the serum/plasma contains an antibody to a low frequency antigen; or (b) the red cells in the donation are DAT positive; or (c) blood of the wrong ABO group has been selected for crossmatching.
