This International Standard specifies a method for the determination of the sulfur content of petroleum products, such as naphthas, unleaded motor gasolines, middle distillates, residual fuel oils, base lubricating oils and components. The method is applicable to products having sulfur contents in the range 0,03 % (m/m) to 5,00 % (m/m).

For petroleum products containing methanol, or other oxygenated hydrocarbons outside the scope of note 1, a dry vapour-pressure test method should be used. For liquefied petroleum gases, ISO 4256 should be used. The test method may be applied to volatile crude petroleum with a vapour pressure exceeding 10 kPa, although the

precision has not ...

ASTM's petroleum standards are
instrumental in the evaluation and
assessment of the physical, mechanical,
rheological, thermal, and chemical
properties of crude oils, lubricating
grease, automobile and aviation
gasoline, hydrocarbons, and other
naturally occurring energy resources
used for various industrial applications.
