Wikipedia

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs. It contains within it two key concepts: □ the concept of 'needs', in particular the essential needs of the world's poor, to which

Sustainable Development: Definition, Principles and Other ...

Sustainability requires that human activity only uses nature's resources at a rate at which they can be replenished naturally. Inherently the concept of sustainable development is intertwined with the concept of carrying capacity. Theoretically, the long-term result of environmental degradation is the inability to sustain human life. Such degradation on a global scale should imply an increase in human death rate until population falls to what the degraded environment can support.

Originally, sustainability meant making only such use of natural, renewable resources that people can continue to rely on their yields in the long term. The concept of sustainability, or Nachhaltigkeit in German, can be traced back to Hans Carl von Carlowitz (1645-1714), and was applied to forestry.
