Neuropsychology of Cardiovascular Disease, Second Edition is an essential desk reference for researchers and clinicians alike." - Adam Davey, Professor of Public Health, Temple University, USA "I commend this book for all those interested in the biomedical basis of the links between cardiovascular disease and the mind.

Neuropsychology and Cardiovascular Disease—Ronald A ...

Roughly one of every three Americans has some form of cardiovascular disease (CVD), including more than 70% of persons older than 75 years of age. Long associated with increased risk for mortality and disability, CVD is also a major risk factor for stroke and cerebrovascular disease.

Cardiovascular (Heart) Diseases: Types and Treatments

Cardiovascular disease (CVD) is the leading cause of morbidity and mortality in the United States and most westernized nations. Both CVDs and their risk factors confer substantial risk for stroke and dementia, but are also associated with more subtle changes in brain structure and function and cognitive performance prior to such devastating clinical outcomes.

Advancing age and a heavy burden of cardiovascular risk factors among chronic kidney disease (CKD) and hemodialysis (HD) patients has focused attention on cerebrovascular morbidity in this population. Dementia prevalence in the HD population has been reported to be 30% and is frequently under recognized [1,2].
