Primates and Philosophers: How Morality Evolved—Frans de ...

De Waal fiercely opposes this, instead arguing that morality has evolved gradually in our forebears, especially in the great apes, our nearest living relations. Veneer The-ory's proponent, Thomas Henry Huxley, is set against de Waal's heroes, Charles Darwin and Adam Smith.

MORALLY EVOLVED—Victor Kumar

"Primates and Philosophers" tackles this question by exploring the biological foundations of one of humanity's most valued traits: morality. In this provocative book, primatologist Frans de Waal argues that modern-day evolutionary biology takes far too dim a view of the natural world, emphasizing our "selfish" genes.

This is a great book if only because it provides views from five different scholars. "In the Tanner Lectures on Human Values that became the lead essay in this book, Frans de Waal brings his decades of work with primates, and his habit of thinking deeply about the meaning of evolution, to bear upon a fundamental question about human morality.

In all of the pri-mates, the younger generation of one sex or another (males in many monkeys, females in chimpanzees and bonobos) tends to leave the group to join neighboring groups (Pusey and Packer 1987). This means that primate groups are far from genetically isolated, which makes group selection unlikely.
